

# Flood Detector

## What is it?

The flood detector is a wireless, indoor sensor that gives early warning of potential flooding in the home and raises an alarm to alert help.

## Who is it for?

It is ideal for homeowners, residents or tenants living independently who may be at risk of a internal flood.

## How does it work?

The flood detector can be placed on the floor under a sink, near a bath or next to a toilet to detect early signs of flooding. When two of its three sensors make contact with water, an audible alarm is raised and an alert is sent to a Lifeline unit or other telecare enabled system. The monitoring centre receiving the alert can identify the type of detector and immediately arrange for the most appropriate action to be taken.

## Features

- ✓ Audible flood detection alarm
- ✓ Automatic flood alert sent to a monitoring centre
- ✓ Small and compact radio sensor unit
- ✓ Transmission to Class 1 radio receiver
- ✓ Dedicated and reliable radio signals for linking telecare enabled systems
- ✓ Optimum radio battery operation with 5 year battery life and low battery warnings

## Benefits

- ✓ **Provides reassurance and extra protection** for people living independently
- ✓ **Prevents flood damage** caused by blocked sinks, toilets or unattended taps being left on
- ✓ **Easy to install** directly onto a flat surface, with no fixture or fitting required
- ✓ **Reduces the consequences of flooding** such as long term health impact, dangerous accidents and damage to furnishings and electrical equipment
- ✓ **Reduces repair costs** and helps to prevent increased insurance premiums
- ✓ **Delivers coverage throughout the home** with an extensive radio range of up to 50m

## Why Argenti?

We focus on using the latest digital and mobile technology to enable people to feel safe, secure and independent, giving them the freedom to live the life they choose. Our service is already benefiting over 18,000 customers across the South East.
